DETAILED ACTION

1. The examiner acknowledges and has entered the amendments/arguments filed on 30 March 2010. Claim **10** is cancelled by this amendment. New claims **19 and 20** are added. Claims **1, 3-4, 6-9, 11-13 and 15-20** are currently pending.

Allowable Subject Matter

2. Claims **1, 3-4, 6-9, 11-13 and 15-20** are allowed.

The following is an examiner's statement of reasons for the indication of the allowable subject matter.

Regarding claims **1, 11, 19 and 20**, the prior art when taken alone or in combination with any other reference, fails to specifically teach the limitation of "wherein the adhesive strengths of the self-adhesive covering element and of the bond between the integrated circuit and the antenna are adjusted relative to each other such that a removal of the security label from the data carrier results in damaging the antenna or separating the antenna from the integrated circuit".

The prior art reference of Royer (US 7,168,623) teaches an electronic label comprising an integrated circuit in a recess of an adhesive layer that is bonded to an antenna disposed on one side of a base and printing on the other side (Figure 6) but does not specifically teach that the adhesive strengths of the adhesive layer and of the bond between the integrated circuit and the antenna are adjusted relative to each other such that a removal of the label from the surface results in damaging the antenna or separating the antenna from the integrated circuit.

The prior art reference of Moskowitz et al. (US 5,528,222) teaches a flexible radio frequency (RF) tag comprising an integrated circuit bonded to an antenna disposed on one side of a flexible substrate base and sealed by an outer adhesive layer for use on a passport (See Figures 2 and 6) but does not specifically teach that the adhesive strengths of the adhesive layer and of the bond between the integrated circuit and the antenna are adjusted relative to each other such that a removal of the tag from the passport results in damaging the antenna or separating the antenna from the integrated circuit.

The prior art reference of Schneider et al. (US 2003/0164611) teaches a security element in the form of a label comprising holographic security features and an integrated circuit bonded to an antenna for attaching to a passport where the antenna is made out of a thin foil that can be damaged upon removal of the label (Figure 5 and section 0024) but does not specifically teach that the adhesive strengths of the adhesive layer and of the bond between the integrated circuit and the antenna are adjusted relative to each other such that a removal of the security label from the passport results in damaging the antenna or separating the antenna from the integrated circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
